- To **be part of teams** working on projects, developing **good rapport and friendships,** brainstorming, planning and delivering quality products.

COVER LETTER

Hi. I'm **Krishnan, son of Ramanathan and Seethalakshmi.** I hail from the central part of **Kerala,** one of the southern states in **India.** I'm a Developer. I believe **being a developer** is not just a profession but **a way of life** that defines how we perceive, analyze, dissect, plan, solve and prevail the **challenges and needs** that present before us in our lives, and how we sometimes create **new features** or **optimize** parts of ourselves, our life and surroundings into **better versions.**

Currently, I focus on mastering **Front-End Development**. I plan on broadening my spectrum to other technologies, platforms and domains eventually. I have the **experience** of working in **different web technologies and frameworks** on a **variety of projects** as **part of teams in multiple organizations,** and also **independently** as an individual.

As a **90's kid and an only child,** I grew up exploring and spending more time with books and screens and it evolved into my hobbies and interests. Learning about the **advancements in technology, computers, the internet and more** has always fascinated me, and that's one of the main reasons for me choosing this career path because it fits right into my forte, interests and the vision and goals I have for my life and career.

Branding along with **Rich Writing** has been my passion ever since i was a kid. I always have loved **hyping** something up and make it appealing with **quality content** in creative and authentic ways - from composing verses, essays, blogs, articles, charts etc. to designs, videos, social media posts and websites nowadays to hype up ideas, stories, events, businesses and people, both individually and as part of teams. Being a kid, **math, science and languages** were my **favorite subjects and strengths.** And I've always enjoyed reading, watching and learning about history, technology, fictions, fantasies and more.

It's the **aspiration for my career** to **be part of teams,** building a rapport, working, completing missions, having fun, achieving big and celebrating together. So, I look forward to **new opportunities** where I can best use my skills for the success of the team and organization, thus catapulting my career onto greater heights and achievements.
